

WhatsUp Gold v16: Upgrade Today

True Single Pane of Glass, Enterprise-Grade IT Management for Your Wired and Wireless Networks, Systems and Applications

CAPABILITY	SO WHAT...
NEW Wireless Infrastructure Monitoring included in v16 at no additional charge	Deep visibility into your wireless infrastructure. Detect rogue access points and network resource saturation, get dynamic real-time mapping and track user activity anywhere on your wireless infrastructure.
NEW Layer 2, port-to-port connectivity, mapping, inventory/asset tracking included in v16 at no additional charge	No need to buy a separate network mapping & asset tracking tool. Automatically discover, map, track and document what's deployed across your entire infrastructure for the most up-to-date picture of your network at all times.
NEW Scalability Pollers and Distributed Polling Architecture	Scales efficiently with your monitoring needs. As your demands and scope of network monitoring grow, WhatsUp Gold has the flexibility to grow with your organization - up to tens of thousands of monitors and devices.
NEW Single-pane-of-glass Web Console for entire WhatsUp Gold Family	Spend less time managing multiple consoles. All the features and functionality of WhatsUp Gold and its suite of plugins is tightly integrated into a single-pane-of-glass Web console.
NEW Embedded Microsoft SQL Server Express 2008 Database	Keep more data longer in the new default database. Microsoft SQL Express 2008 as the default database allows you to keep 2.5 times as much data as v15 to dramatically increase performance.
NEW PowerShell Scripting support for monitoring and alerting	Get deeper visibility into your Windows services. New PowerShell/.NET support gives you more visibility than ever into the mechanics of your Active Directory, Exchange, SQL and other Windows services, with direct access to Windows/.NET management methods and functions.
NEW Support for Formatted WMI Counters and SQL Query performance monitors	Monitor what you want... the way you want. New SQL Query and WMI Formatted Monitors give you highly customizable tools to monitor only your business-critical data, services and applications.
NEW Alert Center thresholds based on average CPU across multi-CPU systems	Understand CPU utilization on Multi-CPU Devices. New Alert Center capability to evaluate average CPU consumption across a device rather than across individual CPUs.
NEW Scheduling Engine for Maintenance Tasks	Save time on your housekeeping tasks. You can automate the execution of basic maintenance tasks such as database backups and optimizations.

WhatsUp Gold... Evolved.

WHATSUP GOLD V16 IS ENTERPRISE-GRADE IT MANAGEMENT...WITHOUT THE HASSLES.

WhatsUp Gold has always been easy to try, buy and use. WhatsUp Gold v16 is no different, and continues to add powerful new functionality while keeping its promise of making IT management simple and affordable. See how far WhatsUp Gold has come over the years:

V12	V14	V15	V16
<ul style="list-style-type: none"> • Split-Second Graphics • Cisco MIB support, SNMP MIB Walker, SNMP MIB Explorer • Drag and drop management capabilities in Web UI • New Monitors (Email, Web, Performance) 	<ul style="list-style-type: none"> • Alert Center • Monitor Dependencies • New Monitors (Fan, SQL Query, HTTP Content, APC UPS, Printer, etc.) • Improved Layer 3 discovery (up to 3 times faster) • Welcome Center 	<ul style="list-style-type: none"> • Integrated Layer 2 discovery and mapping with one click (together with WhatsConnected) • Task-oriented Web UI • Link WUG groups to Active Directory • FIPS 140 -2 encryption and validation (Flow Monitor & WhatsVirtual) • Headless Installer • Simplified password recovery • Absolute-value interface reports • Language Packs 	<ul style="list-style-type: none"> • Wireless Infrastructure Monitoring & layer 2 discovery, mapping, inventory/asset tracking included in v16 at no additional charge • Scalability Pollers and Distributed Polling System • New WhatsUp Gold Plug-in functionality integrated into a single Web console • PowerShell/.NET support for monitoring and alerting • Support for Formatted WMI Counters and SQL Query performance monitors • New Alert Center thresholds based on average CPU across multi-CPU systems • New Microsoft SQL Server Express 2008 Default Database Engine
