

IMail Server PREMIUM Version 11 - *SECURITY BUNDLE*: Building Security for the SMB

Ipswitch takes your organization's email security seriously. With a mixture of services that deliver perimeter-based security and helps organizations more effectively support their messaging needs, the IMail Server Premium Security Bundle offers significant savings while providing you with edge protection from the most reliable names in the industry. IMail Server Premium Security Bundle offers a unique combination of email defense that includes best in class Commtouch anti-spam protection and Symantec anti-virus.

Commtouch is recognized for its near perfect detection rate that blocks more than 98% of spam with any content, in any location, format or language, including image-based and double-byte languages. Commtouch's Global-View™ Mail Reputation Service fights unwanted mail at the perimeter, reducing the majority of incoming messages at the entry-point, before these messages enter the network. All data is analyzed using Commtouch's patented RPD technology, enabling the real-time delivery of IP address classification.

Symantec is a global leader in providing security solutions to help businesses secure and manage their information. The Symantec Scan Engine integrates proprietary and patented URL filtering scanners, and industry-leading anti-virus technology for fast, scalable, and reliable content scanning services to help organizations protect against viruses, spyware, and other malware threats.

The bundled union of IMail Server with Commtouch and Symantec makes perfect sense versus buying these services separately. The combination of services, support and low bundle pricing represents the greatest overall value for our customers. IMail Server Premium Security Bundle provides a solution to costs and complexities associated with deploying and managing more costly and more complex offerings such as Exchange.

The Value of the IMail Server Security Bundle

- > Leading EDGE protection from Commtouch anti-spam and Symantec anti-virus
- > Best value pricing
- > Scalable, standards-based, email server with
- > Enhanced Security with SSL Encryption, SMTP Auth and dictionary attack sensing
- > Secure Instant Messaging with 168-bit 3DES encryption
- > Shared Outlook calendars and global address books with Web access
- > Full mobile synchronization and push email services
